

CITY OF LEBANON

LEBANON, NEW HAMPSHIRE

SFC Engineering Partnership, Inc., (SFC) was retained by the City of Lebanon Department of Public Works to design and prepare construction contract documents and to provide construction inspection services for the total reconstruction of approximately 3/4 miles of roadway and utilities within the City. Improvements to the city water distribution system were designed, consisting of approximately 2,300 linear feet of new water main, valves, hydrants, and water services to both the residential and business community. Working in conjunction with the Lebanon Fire Department, a new fire hydrant system layout was incorporated as part of the water system upgrade. **SFC** performed an analysis of the existing roadway base and pavement and developed a reconstruction plan consisting of full depth pavement reclamation, regrading and repaving of the existing roadway, new granite curbing and sidewalks. **SFC** was responsible for all project coordination with City Officials and Utility Departments and provided construction management and resident engineering services to the City of Lebanon throughout construction of the project.
