

TOWN OF ATKINSON

ATKINSON, NEW HAMPSHIRE

SFC Engineering Partnership, Inc. (SFC) was retained by the Town of Atkinson Planning Board to perform engineering review services for subdivisions and site plans submitted to the Board for approval.

Engineering review services for the Town of Atkinson were performed for residential, commercial and industrial subdivisions as well as residential and non-residential site plans. As part of the review, an on-site inspection was made to verify items contained on the plan. Submittals were reviewed to determine conformance with the Town's subdivision, site plan and zoning regulations, as well as to review technical standards for drainage and roadway construction projects. Comment letters were provided to the Board documenting review comments and recommendations for action. **SFC** was also responsible for the preparation of performance bond estimates and providing site inspection services during construction.

As engineering needs for the Town of Atkinson increased, **SFC's** engineering assignments increased throughout the contract service period to include providing engineering advisory services to the Town Planning Board, Board of Selectmen and Town Road Agent.
