

TUXBURY POND CAMPING AREA

SOUTH HAMPTON, NEW HAMPSHIRE

SFC Engineering Partnership, Inc., (SFC) was first retained by First Hamilton Corporation when they were considering the purchase of a large RV Campground, Tuxbury Pond Camping Area. A “Due Diligence” survey was performed, determining the campground was in need of required upgrades and State (NHDES) sub-division and local site plan approvals, as well as upgrades to the sewer system.

Investment in the property was made, and **SFC** began the work necessary to obtain permits for compliance. Specific tasks included surveying, conceptual planning, State and Local representation and the design and approval of sewer collection and treatment systems. In addition, **SFC’s** creative solution to wastewater treatment satisfied both regulatory agencies and client goals.

Guiding the client through the process, the new plans were approved at State and Local levels in time for the campground to open for the summer, in compliance with all Local and State regulations.
