

EPSOM PUBLIC LIBRARY

EPSOM, NEW HAMPSHIRE

SFC Engineering Partnership, Inc., (SFC) provided structural engineering services for the design and construction of Epsom, NH's new public library. Located behind Epsom's historic Town Hall, the 7,100 square foot building was designed to compliment the town's current architectural environment.

SFC's structural engineering team was responsible for the library's structural framing design: timber and steel framing combined with prefabricated roof trusses. With library patronage increasing 38% over the past ten years, **SFC's** team was able to help bring the Town of Epsom's vision for a new public library to realization.
