

# SALEM SOCCER FIELD

SALEM, NEW HAMPSHIRE

The Salem Youth Soccer Association contacted **SFC Engineering Partnership, Inc., (SFC)** for help developing and improving their fields.

In phase one, **SFC** donated time to prepare plans for the design and permitting of a new blockhouse for a food concession, office and storage areas, and public restrooms. The scope of the work included design for the extension of utilities to the blockhouse.

**SFC** also designed the complete reconstruction of a soccer field. The existing field was not sloped which created puddling therefore making it difficult to maintain the turf and to schedule games on the field.

**SFC** designed a new and larger field on the available land- regraded to achieve a positive stormwater runoff from the field. The field elevation was designed so no additional fill was required at the site. An irrigation system was installed to maintain a healthy turf. This project was coordinated with a Town project to extend a water line through the field, efficiently helping the Town of Salem realize its goals.
