

STONE CHURCH

NEWMARKET, NH

SFC Engineering Partnership, Inc., (SFC) was selected to provide Structural and Fire Protection Engineering services in preparation for the renovation of the Stone Church building in Newmarket, NH. Structural, life safety and fire code conditions and requirements were addressed. Existing conditions were investigated and evaluated, a code review was conducted, a fire and life safety report was prepared, (as was a structural report), and **SFC** met with owners and code officials as needed. A plan of action was established to address required upgrades and then working drawings, specifications and construction cost estimates were prepared. **SFC's** fire protection engineers prepared specifications for the automatic sprinkler and fire alarm systems. In addition, seating plans were readied and shop drawings were reviewed. Stone Church, originally built in 1832, was successfully renovated and has re-opened for use as a restaurant and ballroom.
